1. Mental Health Literacy Affects Mental Health Attitude: Is There a Gender Difference?

(includes abstract) Hee Yun Lee; Junseon Hwang; Bail, Jennifer G.; Jongwook Lee; Youngmi Yu; Albright, David L.; American Journal of Health Behavior, May/Jun2020; 44(3): 282-291. (10p)

(Article - research, tables/charts) ISSN: 1087-3244 AN: 142625830

Abstract: Objectives: In the current study, we aimed to compare the levels of and factors associated with mental health attitude between males and females. Of particular interest was ascertaining the degree to which mental health literacy was related to mental health attitude and whether this relationship would vary by gender. Methods: A total of 732 participants aged 18 years or more were recruited from attendees at the 2016 Minnesota State Fair. We used the Mental Health Literacy Scale (MHLS) to measure attitude toward and literacy of mental health. Results: Our multivariate analysis reported that males' mental health attitude was significantly lower than females. Some factors associated with mental health attitude differed by gender as well. Among men, receiving more social support, experiencing higher levels of depression, and being married predicted greater mental health attitude. Among women, older age was associated with lower mental health attitude levels. However, mental health literacy was the strongest factor regardless of gender. Men and women with greater mental health literacy had a more positive mental health attitude. Conclusions: Provision of tailored mental health literacy education both for males and females could potentially improve the public's mental health attitude toward mental illness.

Subjects: Mental Health; Health Literacy; Attitude to Health; Sex Factors; Adult: 19-44 years; Middle Aged: 45-64 years; Male; Female

2. Cluster Analysis: Vaccination Attitudes and Beliefs of Healthcare Personnel.

(includes abstract) Bardenheier, Barbara H.; Lindley, Megan C.; Bail, Sarah W.; de Perio, Marie A.; Laney, Scott; Gravenstein, Stefan; American Journal of Health Behavior, May/Jun2020; 44(3): 302-312. (11p)

(Article - research, tables/charts) ISSN: 1087-3244 AN: 142625832

Abstract: Objectives: We sought to identify patterns of knowledge, attitudes, and behaviors (KABs) about influenza and influenza vaccination among healthcare personnel (HCP) and define characteristics associated with these patterns. Methods: We used an Internet panel survey of HCP (N = 2265) during March 27-April 17, 2018; clustered HCP by their vaccination-related KABs. Results: Four clusters were identified: Immunization Champions (51.1% of the sample) received influenza vaccine to prevent disease; Unworried Vaccinators (15.4%) received the influenza vaccine but did not believe influenza is a serious threat to themselves; Fence Sitters (8.1%) believed the vaccine is safe and worth the time and expense but is not effective; Skeptics (15.4%) did not believe the vaccine is safe or effective. Influenza vaccination coverage was 78.4% overall and higher among Immunization Champions (90.2%) and Unworried Vaccinators (87.0%) than Fence Sitters (51.6%) or Skeptics (32.2%). Conclusions: Findings suggest that based on KABs, the 3 clusters comprising 85% of HCP might be vaccinated in the future. Using messages specific to each group may improve vaccination coverage among HCP.

Subjects: Attitude of Health Personnel Evaluation; Professional Knowledge Evaluation; Health Personnel Psychosocial Factors; Immunization; Influenza; Human Prevention and Control; Adolescent: 13-18 years; Adult: 19-44 years; Middle Aged: 45-64 years; Aged: 65+ years; Male; Female

3. Latent Growth Model of Predictors of Health Status in Korean Older Adults.

(includes abstract) Ki Sook Ko; Hee Yun Lee; Cho Rong Won; American Journal of Health Behavior, May/Jun2020; 44(3): 364-374. (11p)

(Article - research, tables/charts) ISSN: 1087-3244 AN: 142625838

Abstract: Objectives: In this study, we investigated the health status trajectory of Korean older adults with chronic diseases and its relationship with relevant ecological level factors. Methods: We analyzed data from the 2013 to 2015 Korea Health Panel Survey using the latent growth model. Results: Results showed that Korean older adults' health status decreased over time. Relevant ecological level factors affecting older adults' health status directly or indirectly included alcohol problems, caregiver burden, and healthcare cost burdens. The higher the initial health status was found to be, the higher the initial alcohol problem and initial caregiver burden. The higher the initial caregiver burden was found to be, the higher the initial alcohol problem and initial healthcare cost burden. Conclusions: To improve the health status of older adults with chronic diseases, interventions and health policies to reduce alcohol problem, caregiver burden, and healthcare cost burden should be developed and implemented.

1. Mental Health Nursing : The Working Lives of Paid Carers, 1800s-1900s

By: Borsay, Anne; Dale, Pamela. Series: Nursing History and Humanities. Manchester : Manchester University Press, 2015. eBook. Description: This book seeks to integrate the history of mental health nursing with the wider history of institutional and community care. It develops new research questions by drawing together a concern with exploring the class, gender, skills and working conditions of practitioners with an assessment of the care regimes staff helped create and patients' experiences of them. Such an approach aims to correct the neglect of mental health workers in recent histories of nursing and care. Contributors from a range ... (AN 1232348)

4. Workplace Mental Health Manual for Nurse Managers

By: Lisa Y. Adams PhD, MSc, RN, [N.p.] : Springer Publishing Company, 2014. eBook. Description: 'This text provides a comprehensive overview, if not thesis, of the contributing factors to workplace stress and how to revisit [them] and our own mental health. How can nurses and health care workplaces expect to offer health and healing when such basic foundational human dynamics of mental health are not addressed? This work opens the door to both the dynamics and the deep dimensions of the root issues facing humanity and our places of work and play.'o Jean Watson, PhD, RN, AHN-BC, FAAN (From the ... (AN 813065)
